AGELLIS Group receives order from India

AGELLIS Group AB (publ), has received an instrumentation order for a furnace level measurement system from one of the premier steel producers in India. The order has a value of approximately 180.000 Euro. This is an important reference order for Agellis in the expanding Indian steel market.

Agellis has focused our promotion on the Indian market for some time now and this instrumentation order is an acknowledgement that the Agellis products are well suited to this rapidly growing steel making area of the world. The instrument, called EMLI FT, will be mounted on a CONARC® furnace and will be used to monitor the foaming slag level during production. The information provided by the instrument will be used to optimize the production process.

"The Indian steel plant is constructing three additional CONARC® furnaces and we hope to be able to also equip these furnaces with instruments within the next 18 months", says Mårten Öbrink, CEO of AGELLIS Group and continues "We expect good business in India going forward, we want to be present in this increasingly important market".

This instrumentation enables the plant unique possibilities to optimize their production process, to increase yield, improve safety and reduce maintenance. The EMLI FT instrument is the latest in a range of instruments to be connected to the very successful Agellis EMLI instrument platform.
