## **Agellis presents new product and receives order from leading European copper plant**

**AGELLIS Group AB has received an order from a leading European copper plant for the EMLI-S, a new system for metal level measurement in smelters. EMLI-S is the first system based on the new EMLI 3 product platform recently developed by Agellis. The order value is for more than 1 MSEK.**

Agellis is a rapidly growing innovative company that develops, manufactures and markets advanced process control sensor systems, primarily for the global metals industry. EMLI-S is the first system from Agellis for the copper industry and the launch of this product opens up a new and extensive market for Agellis technology. Automated metal level measurements in copper smelters are a new application which is relatively free from competition. Agellis has already initiated discussions with similar copper plants and smelter producers.

"Instruments for automated metal level measurement in non-ferrous applications are eagerly awaited in the copper and other smelting industries. Agellis has the only fully automated product for metal level measurement in this area and I expect this new product to be very successful, says Mårten Öbrink, CEO of AGELLIS Group AB.

The instrument will be delivered during the first quarter and installed during the second quarter of 2008.
