Agellis receives an order for 1,0 MSEK from the US

The AGELLIS Group who develop systems and solutions for the global metals industry has received an order for 1,0 MSEK for measurement instruments from an American plant.

The EMLI T instrument is used for measurement of the metal level in tundishes. A similar instrument is already installed in another plant within the group to which this customer belongs. Other instruments from Agellis are also being tested within the same group.

”This new order is further proof that Agellis instruments work well and provide clear value to our customers”, says Mårten Öbrink, CEO at Agellis.

The steel production in the US decreased considerably during the financial crisis and is still recovering. The US is the third largest steel producer in the world after China and Japan and thus an important market for Agellis. For competition reasons, Agellis does not disclose the names of our customers, unless given permission to do so.
